RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 44 pages. Original publisher: Denver, Colo. : U. S. Dept. of the Interior, Bureau of Reclamation, Technical Service Center, Water and Environmental Resources Division, Sedimentation and River Hydraulics Group ; Springfield Va. : Available through the National Technical Information Service, 2008 OCLC Number: (OCoLC)712646071 Subject: Reservoir sedimentation -- New Mexico -- Sierra County. Excerpt: . . . Reservoir Sediment Distribution Lateral Distribution Ground profiles of the 32 reservoir sedimentation ranges are plotted on figures 5 through 36 where the profiles illustrate the general lateral distribution of sediments in the reservoir. The plots illustrate the survey results from the 1938 (original), 1981, 1999, and 2007 surveys. During the 1981 survey, the above-water portions of each range line from each end point to the water edge were measured. For the main portion of the reservoir, range lines 1 through 10, the results from the 1981 and 1999 surveys were used to develop the range line plots for the areas not covered by the 2007 underwater survey. The 1981 and 1999 data were also used to complete the plots of the remaining range lines (11 through 31) in areas that the 2007 field crew and collected data determined there was no significant change and for portions that were not accessible. Longitudinal Distribution To illustrate the sediment distribution throughout the reservoir a longitudinal profile was plotted for the 1938, 1981, 1999, and 2007 reservoir conditions (figure 37). The differences between the profiles represent the sediment encroachment into the reservoir since the dam closed in 1938. The average bottom elevations for each range line were used to plot these longitudinal profiles. As with the lateral plots, the longitudinal plots illustrate minimal change since the 1999 survey. The...
