Reviews

Excellent electronic book and helpful one. Better then never, though i am quite late in start reading this one. You wont truly feel monotony at whenever you want of your time (that's what catalogues are for relating to when you question me).

(Mabelle Dach III)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1836 Excerpt: .age was to be $40 + x$, and the son s $18 + x$. These are in the present instance $40 - 7$, or 33 , and $18 - 7$, or 11 . And 33 is 3 times 11 . The negative sign teaches us that the number of years that is to make the father's age 3 times the son's is to be subtracted, not to be added, and accordingly we find, that 7 years ago the father's age was just three times the son's. Observe, that when $a = 3b$, $x = 0$; that is to say, that when the father is three times as old as the son at the present time, x is neither a quantity to be added nor subtracted. This question may be made still more general by proposing to find when the father's age will be n times the son's. We should have as before $a + x = nb + nx$, whence we find $a - nb = x(n - 1)$. $n = 114$. A and B find a purse with shillings in it, A takes out two shillings and one sixth of what remains; then B takes out three shillings and one sixth of what remains; and then they find that they have taken equal shares. How many shillings were in the purse, and how many did each take? Let x be the number of shillings in the purse at first. A takes out $2 + \frac{1}{6}(x - 2)$; there remain $x - 2 - \frac{1}{6}(x - 2)$. B takes of...
